Le Resume Studio

User Tutorial

October 14 2026 | Published app version 22

Use this guide to turn your own work history into a tailored resume and matching cover letter, review the results, and save both files. A new visitor starts with a blank master resume. Returning visitors keep the master and application versions saved in their browser.

Open Le Resume Studio

1 Add your master resume

Open Master resume or choose Add resume. Upload a Word (.docx), text-based PDF, UTF-8 .txt or rich-text .rtf resume. Master resume allows file upload only; there are no manual editing fields. Files must be nonempty and no larger than 10 MB; PDFs must have 30 pages or fewer. Scans need a text copy. Uploads are read in your browser without sending resume contents to a server.

Section	Optional information the app can use
Contact details	Name, email, phone and LinkedIn URL are optional for upload. Review contact information before applying.
Summary and competencies	A summary and skills are optional. Include them when available; no specific headings are required.
Experience	Job titles, companies, dates and accomplishments are optional for upload. Supplied facts are used without inventing missing details.
Skills and education	Skills and education are optional. Missing school names, qualifications and dates do not block upload.

Any readable nonempty upload saves automatically, without required sections. Review the version-one-style sections for contact details, summary, competencies, experience, technical skills and education. Each detected role has its own expanded Experience section showing company, years and bullets. Check this list against your source file; combined headings across two lines are supported. View uploaded resume text shows the original extraction. All source details are read-only. Final accomplishments stay with their role; job headings retain the uploaded role, company and year order. To correct the source, edit your original file and upload it again. Each successful upload requires a unique filename in this browser master workspace, ignoring capitalization. Rename revised files before uploading. Clear Master Resume also clears filename history. Failed uploads preserve the prior master.

Choose Clear Master Resume to immediately delete every master subsection, imported file data, extracted text and filename history from this app. No browser confirmation popup is needed. The dialog shows No master resume saved; the current workspace clears and pending imports are canceled. The master stays blank after reopening. Failed storage deletion shows an error and allows retry. Your source file on your computer is unchanged; the app retains extracted data rather than the original file bytes. Saved applications are removed separately with Clear saved versions. Word and PDF uploads retain supported typography and structure; complex layouts can change. TXT and RTF use a professional single-column template.

Protect your private workspace

App links do not contain applicant data. Uploads, tailoring and exports run in your browser; the app does not send resumes to an applicant database or other users. A fresh browser starts blank. On a shared browser profile, enable password protection before leaving saved data on the device.

1. Choose Privacy and password in the navigation.

2. Enter and confirm a unique passphrase of at least 12 characters, then choose Protect saved data. Existing master and saved versions are encrypted; their old plaintext records are removed after encryption succeeds.

3. Before handing the device to another person, choose Privacy and password, then Lock private workspace. This blanks the workspace without deleting the encrypted master or saved versions.

4. After reloading or reopening, enter your passphrase through Privacy and password to unlock the saved data. Sections 1 and 2 remain blank until you use the master or reopen a saved version.

Keep the passphrase safely: there is no recovery service, server account or cross-device synchronization. Without password protection, saved data belongs to the browser profile and can be read by another person using that profile. Protection applies to saved data; another person can see an unlocked tab or a separately downloaded file. Close download tabs and protect files on the device separately.

Open download page uses a private, five-minute browser-session handoff. The URL contains only a random identifier and cannot retrieve the document in another browser session. Popups or session storage may be blocked; use the direct save option if the new tab cannot open. Sharing a file through your device’s Share option is an explicit action you control.

2 Tailor and review both documents

1. In Section 1, optionally enter the job title and company. These details help label the saved version and personalize the letter.

2. At “Please add the job description so your resume can be tailored.” paste the full posting. Include responsibilities, tools, skills, and qualifications. Use at least 80 characters and 12 words; the maximum is 40,000 characters.

3. Choose the employer’s Applicant tracking system if known. Otherwise leave General ATS format selected. The selector includes all 46 requested systems.

4. Open Tailoring preferences if needed. Focused keeps up to four bullets for the first role and three for later roles. Full detail keeps every bullet. Both retain every parsed job in source order with its original employer, title and dates, even when a job is less relevant. The preview reports how many source jobs were retained; compare this count with your uploaded file.

5. Use Additional keywords for a job phrase the app missed, separating phrases with commas. The posting and your master resume must support any phrase used to improve the score.

6. Choose Tailor resume + cover letter. Both documents appear in Section 2, and the application is added to Saved versions when browser storage is available.

What to check in Section 2

Tab	Purpose
Resume and Cover letter	Read the complete documents. Confirm accuracy, relevance, dates, contact details, and the letter’s greeting.
Keywords	Compare separate resume and cover-letter scores, included phrases, missing wording, and unsupported qualifications.
Writing review	Check English edits, action verbs, sentence length, and wording flagged for your review.
ATS review and Changes	Check document content and platform guidance, then inspect how the original resume was tailored.

Understand the 10 out of 10 target

The score measures the unique job phrases this app detects. A phrase counts only when it appears in the document and is supported by your master. Unsupported requirements keep the score below 10/10. Cover-letter scoring uses its paragraph text. Add genuine missing experience to your source file, upload it again and tailor; do not add qualifications you do not possess. Negated experience and learning goals do not establish qualifications. The summary does not invent a new professional title from shared skills. A 10/10 result requires source evidence for every detected phrase; this measure does not cover every requirement or guarantee an employer’s ATS result.

3 Edit and download your application

Make final edits

Select Resume or Cover letter, then choose the edit icon in the review toolbar. The resume editor revises the summary, competencies and accomplishment bullets. To change contact details, employers, job titles, dates, skills or education, edit your original master file and upload it again. In the cover-letter editor, personalize the company, subject, greeting, paragraphs, closing and signature.

Save your changes and recheck Keywords and Writing review. Editing a resume regenerates the cover letter until you have customized the letter. Once customized, the letter is preserved when the resume changes, so check that both documents still agree. Changes to a tailored document do not rewrite your master.

Save a resume and a cover letter

1. In the export area, select Resume or Cover letter. Choosing the corresponding preview tab also selects that document.

2. Choose Word .docx, PDF, or Plain text. This prepares a file and opens the save options; it is not the final save step.

3. If you are using the app inside ChatGPT, choose Open download page. A separate browser tab receives the selected document.

4. Choose Save file… if a folder picker is available, or Download file to use the browser's download manager. A phone or tablet may show Share file with a Save to Files option.

5. Check the chosen folder or the browser's Downloads list, open the file, and confirm the content. Repeat for the other document.

Format	Choose it when
Word DOCX	You want an editable file or the employer requests a Word resume.
PDF	The employer accepts PDF and you want stable layout with selectable text.
Plain text TXT	You need to copy content into a form or read text without formatting. Some ATS resume fields do not accept TXT.

Files are generated in your browser. The app cannot force every browser to use one download folder. A native save picker lets you choose; ordinary downloads follow your browser settings. "Download requested" asks you to check the download manager. "File saved" is shown only after the native file write completes. If a file opens in a preview, use that preview's Download or Share action.

Choose the copy control to copy the selected document. If automatic copying is unavailable, use Select all text in the copy dialog, then Control+C, Command+C, or your device's Copy command.

4 Manage saved data and shared links

Saved versions holds your last ten applications in the current browser profile, including each resume, cover letter, posting, and review data. Open Saved versions and choose an application to restore it into the workspace. Older saved resumes receive a cover letter when opened if one was not previously saved.

Action	What happens
Open or refresh the app	Sections 1 and 2 return to blank. Job fields, previews, temporary editor changes, and prepared download links reset. The saved master and versions remain.
Open a saved version	The selected application fills the workspace. Its saved master snapshot is available with that application.
Clear saved versions	Immediately deletes saved applications from this browser, including resumes and cover letters, and clears the open workspace. The master remains.
Clear Master Resume	Immediately deletes all master sections and imported file data from the app. Saved applications remain, and the master stays blank when you reopen the app.
Use a different device or browser profile	The new profile starts without your master or history. There is no account synchronization of applicant data.

Sharing the app

Share the ordinary app link. A new end user with access to the Site and a browser profile that has not used it receives a blank Master resume and zero saved versions. The link does not transfer your master or saved applications. Site access follows the owner’s sharing settings; sending the link does not itself grant access.

Without password protection, people using the same device and browser profile can see the local data stored there. On a shared computer, download the files you need, clear saved versions, and clear the master. Clearing app data does not delete files already saved to Downloads or documents transferred into a separate download tab. Close those tabs and manage downloaded files separately.

When storage is unavailable

A persistent notice explains when storage is unavailable. Upload a master, tailor and download documents in the current tab, then save copies before closing it. If clearing reports a storage error, retry and verify it; the prior stored source may return after reopening. Confirmed deletion is reported only after storage accepts the change.

5 Accessibility and common questions

Navigate with a keyboard or assistive technology

- Use Tab and Shift+Tab to move through controls. Use Skip to main content to reach the workspace.
- Within the review tabs, use Left Arrow, Right Arrow, Home, or End to switch panels. Tab then moves into the selected panel.
- Use Escape or the labeled Close button to close a dialog. Focus returns to the control that opened it.
- Use browser zoom and text settings to enlarge content. Document previews and keyword tables can receive keyboard focus for scrolling.
- Use Plain text exports or the manual copy dialog if these better suit your reading tools. Motion follows the device’s reduced-motion preference.

The app includes accessibility improvements and automated checks. Real screen-reader, device, and browser verification is still needed before a full accessibility conformance claim.

Resolve common problems

Problem	Next action
Tailoring is disabled	Upload a readable source file; no resume sections or personal fields are mandatory.
The posting is rejected	Paste the full description. Check the minimum of 80 characters and 12 words and the 40,000-character maximum.
The score is below 10/10	Read the missing phrases and evidence gaps. Correct genuine omissions in the master and tailor again.
A file is missing	Finish the save step, check Downloads or the selected folder, and use Open download page from an embedded app.
Word or PDF fails to load	Try the format again. Use Plain text if the export dependency cannot load.
PDF changes a name or character	Use Word or Plain text to preserve characters outside the PDF font’s supported set.
My saved versions are absent	Return to the original browser profile and unlock through Privacy and password if protected. Clearing browser data or private browsing can remove or isolate saved data.

For feedback, describe the task, device, operating system, browser version, expected result, actual result, and any error text. Remove personal resume details from screenshots or examples you send. The Web and Mobile Browser Guide contains the developer’s detailed troubleshooting and test plan.
